Green Lab started in 2004. To enjoy snowboarding and practice sustainable rural living, we use Japanese wood, assemble the wood cores ourselves, and make snowboards at a reliable Japanese factory, testing the ride every day. Japan is one of the world's leading forest nations, surrounded by lush green forests, yet it relies on imports for much of its lumber, transporting it to Japan using CO2. Even the conifers planted through national policy have lost market share to concrete and steel, and forests with few uses are no longer properly maintained and are becoming neglected. It's a waste that there is good timber in the mountains. We have snow, mountains, and excellent materials. That's why we snowboarders started making snowboards. That indescribable feeling of being enveloped by the forest, that wonderful ride, when we first slid down the local larch forest on the snowboard we finally created through trial and error. We'd be thrilled if everyone could share that ride.

YAMAKI WOODCORE

GREEN.LAB snowboards feature a "Yamaki Wood Core" made from 100% domestic timber. Japan boasts abundant, world-renowned forest resources, yet our self-sufficiency rate for domestic timber remains low, meaning these magnificent trees are not being utilized effectively. We craft our wood cores using locally sourced coniferous trees—including larch, red pine, and cypress—from both managed forests and natural stands, including thinned timber, as well as other broadleaf species. This is a board truly worth nurturing. By effectively utilizing wood, forests can be revitalized. This effort also contributes to forest management, the use of domestic timber, preventing landslides, and reducing CO2 emissions. YAMAKI GRASSROOTS Human Technology ~ A grassroots movement that makes the mountains happy, driven by human hands...

GRAPHITE SOLE / for all lineups

All models feature ACT GEAR's custom sole, based on the R2118ACT GEAR Original Sole ISOSPEED NANO CARBON BLACK SOLE, with graphite content increased to 15%. This prevents impurities from adhering due to static electricity, maximizes wax performance, maintains glide performance, and delivers peak performance.

STAINLESS EGG / for all lineups

Features rust-resistant, domestically produced stainless steel edges.

150 limited production in the world /2026-27
